

TEAM2SHARE

Team2Share project is an ERASMUS+ funded project which aims support the acquiring of key competences, including basic skills for aa through the development and transfer of innovative learning methods for low-skills adults, including but not limited to vulnerable groups.

TEAM2 SHARE

Dear friends,

Welcome to the second newsletter of the Team2Share: Integrated Training & Teaching for Learning further aiming Knowledge Sharing Across Generations project,

co-financed by the European Commission through the Erasmus+ Programme. The current issue will update you on the information regarding the background and rationale of the proposal, the participants, the objectives, activities undergone by the consortium partners and expected results.

The main focus of this edition is the working process for the elaboration of the project's **Intellectual Output No. 1** consisting of a training programme for trainers/teachers/mentors working with low skilled adults which is, in turn, based on a training curriculum and content inserted in an ICT state of the art Android application (App1; App2 will be developed in 2022 for the project trainees). This tool has been developed in accordance to an innovative methodology focusing on "team-oriented learning in interactive working groups", relying on the principle "reproduction of the learning material in its own words deepens the acquired knowledge".

Intellectual Output No1: Training programme for trainers/trainers/mentors working with low skilled adults

Work in progress for the IO2 - Training programme for low skilled adult

As a content provider, the project leader, the National Scientific Research Institute for Labour and Social Protection (INCSMPS) has already begun working, according to the timetable for the activities implementation, on the "Training Curriculum and Content" for low skilled adults. The development of the IO2 is coordinated by INCSMPS based on its considerable expertise in the field of competence development for disadvantaged groups.

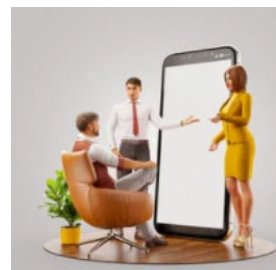

Activities supporting the achievement of IO1 & IO2 in the first 15 months of the project

Taking into account the pandemic situation and the health restrictions in place, the first three transnational meetings scheduled to take place in the first 15 months of the project in Bucharest, Vienna and Ankara were instead held via zoom/webex meeting.

The aforementioned meeting was followed by several other meetings hosted online by the project partners, in 2021, focusing on project management, progress monitoring - the stage of IO1 and IO2 development - self evaluation of project implementation and interim results (beta version of Web Portal and App).

Specialising in developing methods and tools, but also individual coaching and counselling for integrating disadvantaged low-level educated learners into the work life, Blickpunkt Identität (BLICK), our partner from Austria, has been leading the development and implementation of the project's Intellectual Output No. 1 (IO1), in coordination with our partners from Turkey, EBL Elektronik Bilgi Bilisim ve Mesleki Egitim Hizmetleri (e-BL) and Tüm Avrupa Kadınları Kültürel İşbirliği ve Dayanışma Derneği (TAKKID), while including relevant feedback from the other participants to the Team2Share project according to their expertise.

As an innovative course provider, BLICK proposed an ingenious pedagogical framework consisting of "team-oriented learning in interactive working groups", which is based on the principles of "self-organised learning" and "reproduction of the learning material in its own words deepens the acquired knowledge". This approach has been fundamental to the development of the training curriculum and content for trainers/trainers/mentors, but also to the creation of the ICT tool - an Android application.

The "Learning through teaching - Training Curriculum and Content" contains all the information regarding the proposed methodology and how to use it to shape 12 courses/modules regarding the basics of learning through teaching and self-organised learning; setting up the curriculum for learning through teaching and Self-organised learning.

These 12 courses/modules are currently being translated into the partners' languages of use.

Android App supporting the interactive use of the Training Curriculum and Content.

For maximum efficiency, the learning material/content is now available for teachers/trainers/mentors/trainers in the form of a user-friendly digital App based on Android OS. Since e-BL has considerably strong background and experience in meeting adults' learning needs through digital solution, they have been in charge of the design and functioning of this state-of-the-art ICT tool, but also of uploading the teaching content online, apart from their work on creating the web portal for the project.

Also, during the design and implementation phase, all partners have been asked to contribute by providing feedback to the translation and validation of the final version of the App, which is a consolidation in the implementation of the Team2Share technique on their trainees.

Therefore, the Team2Share ICT tool, based on the "team-oriented learning in interactive working groups" methodology, allows the repetition and refreshment of the new knowledge by "low skilled adults" targeted by the project by changing their roles from being a trainee, into being a teacher or trainer in order to increase the acquired knowledge retention volume and improve sustainability.

The Team2Share tool's method will involve 2 groups of learners who will change their roles after each course they will attend. For example: in the morning group 1 has English language training, group 2 has a module in personality training. In the afternoon, Group 1 teaches Group 2 what they learned during the morning session with the support and supervision of the trainers. This will take a place in different group sizes with different methods by the aid of the flexibility of Team2Share tool's online teaching/learning/guiding functionalities. The next day the groups will be swapped.
